SECTION I. Sampling Methods and Response Rates

1. Sample Design

Population Coverage — The targeted population consisted of citizens of Republic of China (Taiwan) aged 20 and 69 years old (i.e., born after Jan. 1st of 1935 before Dec. 31st of 1984), who currently live in registered households in Taiwan.

Sampling Methods — The survey sample was drawn from the official household registration database, using a 3-strata PPS (probability proportional to size) sampling procedure. The actual sampling procedure is as follows: using indicators such as “population density”,¹ “educational level”,² “percentage of population above age 65”, “percentage of population between 15 to 64 years old”, “percentage of industrial workers”,³ “percentage of workers in commercial industries”,⁴ we divided Taiwan’s cities, towns, and villages into seven categories of geographic areas (e.g., large cities and their metropolitan areas, newly developed cities, remote towns, etc.). We combined Categories 6 and 7 while selecting the sample, because these two categories contain relatively small numbers of cities and counties. Our first step was to determine the number of respondents required from each of the six categories based on their relative population size. Next, by the geographical category we randomly selected the counties, villages, districts, and wards to be included in the survey sample, based on the size of these geographical units’ populations. We then used a systematic sampling scheme to

¹ Population density refers to number of population per square miles

² Percentage of persons 15 years and older who have at least junior college degree.

³ Percentage of industrial workers = number of industrial workers/total population

⁴ Percentage of business workers = number of employee in commercial industries/total population.

sample potential respondents from the counties, villages, or wards selected, until we reached the desired sample size.

We expected to have 5000 successful cases for this survey. In order to reach this target, we inflated the sample of potential respondents based on our past experiences with survey refusal rates for different areas. For example, our experience indicated that highly urbanized areas, such as Taipei city, tend to have higher refusal rates. We therefore inflated the sample of potential respondents for the Taipei metropolitan area to a greater extent than we did for other cities. To be specific, we used the averages of the refusal rates from recent waves of the Taiwan Social Change Survey (i.e., TSCS 4-3, 4-4, and 4-5) to determine the inflation rates for each area sampled. The inflation rates we used were between 2 to 4, resulting in a final sample of 12,041 potential respondents.

To ensure this sample's representativeness of the target population, we compared the sample to the 2005 population data provided by the Ministry of Interior Affairs. Using Chi-square tests, we compared our sample's distributions of (1) sex, (2) age, and (3) age*sex with those for the target population. The results indicated high consistency of our data with the general population. Table 1-1 shows the results in detail.

Final sample size — We selected 12,041 potential respondents, with the expectation to have 5,068 successful cases in the end. The final number of successful cases, however, is 5,379. Thus, the survey's crude response rate is 44.69%. Tables 1-2 and 1-3 provide the break-downs of the survey response rate by area and reasons for failed cases, respectively. As Table 1-3 shows, 1,647 individuals in the original sample were either not living in the household stated in their household registration records

(coded 32-38, 57-85), or were unable to communicate with interviewers because of their physical or mental disabilities (coded 55). We therefore recalculated the response rate excluding those cases, as they should not be considered as potential respondents in the first place. After excluding the invalid cases, the survey response rate becomes 51.77%.

SECTION II. Data Collection and Processing

1. Data Collection

The survey data were collected through face-to-face interviews. We employed 190 interviewers to conduct the interviews. The entire fieldwork took seven weeks, from September 5th, 2005 to October 23rd, 2005. In addition to the 190 interviewers, we also recruited 30 supervisors to assist, monitor, and coordinate with the interviewers during the fieldwork period. To be specific, the supervisors' main tasks were to help resolve unexpected problems during the fieldwork; to ensure that interviewers collect the survey data truthfully and correctly; and to double check the questionnaire responses that the interviewers turned in. The interviewers were asked to write down all the responses on the questionnaire during each of their interviews. After an interview was complete, the supervisor in charge of the area would examine the completed questionnaire to ensure all responses are logical and reasonable.

Most interviewers and supervisors have previous experiences conducting face-to-face interviews. Nevertheless, two-day training courses were provided for supervisors and interviewers, respectively, from September 3-4th 2005. An additional meeting was also held on September 10th for the supervisors to report back the difficulties that they and the interviewers encountered during the process.

Each interviewer was asked to strictly follow the procedures described below while collecting the survey data: 1) every person included in the sample list given to the interviewer has to be contacted, unless the interviewer is informed during the first visit

that there is no possibility that the person can be found (i.e. due to death, migration, etc); 2) cases other than those listed in 1) must be contacted at least three times before an interviewer can give up; and 3) an interviewer's job is not complete until all the people in the sampling list have been contacted and the interviewer is certain that there would be no more cases who might accept an interview.

The supervisors were responsible for counterchecking the survey responses to ensure the authenticity of the data. They are asked to countercheck successful and failed cases separately. For the successful cases, a supervisor would randomly select 30 percent of those who could be reached by phone and counterchecked the interview results by phone. A supervisor would also randomly select 30 percent of the respondents who did not provide phone numbers and visited them personally. As to the failed cases, the supervisors would select 30 percent of such cases and double check the validity and accuracy of the information that the interviewers have recorded (e.g., reasons for failures or refusals).

2. Data Processing and Validation

The data processing consisted of three steps: first, the supervisors checked respondents' answers, converted them into numerical codes, and wrote the codes into the boxes provided next to each question in the questionnaires. The supervisors also organized meetings with interviewers to ensure that all answers and responses are clearly stated in each completed questionnaire.

Second, all questionnaires were mailed back to the survey project office, where the project assistants checked the accuracy of results by comparing the

successful cases' age and sex to those indicated in the original sample list. The project assistants were also responsible for resolving unexpected problems. They also checked the consistency of survey responses for each case. When illogical answers occurred, the project assistants generally tried to contact the respondent by phone to correct any mistake.

Third, after the project assistants checked all the survey responses, the completed questionnaires, on which the responses were converted into numerical records, were sent to an outside company. This company was responsible for keying in the data. The same data were entered twice into the computer system by different people to ensure accuracy. After the data entry was complete, the project assistants ran computer programs on the data to search for the following types of errors:

(1) Missing values: there should not be any missing value due to mistakes occurred during the data processing.

(2) Unreasonable values: for each variable there should not be unexpected codes; any of such codes would be corrected.

(3) Logic checking: respondents' answers should be consistent and logical (e.g., one cannot be older than one's parent). When a respondent's answers seem illogical, the project assistants called the respondent (if possible) to double check the accuracy of his or her answers.

SECTION III. Additional Explanations on Coding

1. Basic Coding Scheme

- The following coding system applies to most questions:
 - “skip, missing, or not applicable”, coded as 9, 99, 999, 9999.
 - don’t know, don’t remember”, coded as 7, 97, 997, 9997.
 - “refuse to answer” coded as 8, 98, 998, 9998.
 - “till now”, coded as 96.
 - “not sure”, coded as 995.
- For questions where more than one answer is allowed, each of the response options is coded as a dummy variable, where 1 indicates the response being checked and 0 response unchecked.

2. Added Variables

In order to record the complete work and life histories of each respondent, we included as many variables as needed for respondents’ education histories, working histories, residential histories, and their spouse’s working histories. We explain these added variables in the following:

- Education history: the longest experiences involve 7 stages (added one set of variables for schooling experience; also see Table 3-1).
- Marriage history: the longest has four marriages (added one set of variables); see Table 3-2.
- Working history: some respondents had very complicated and special working experiences. The respondent who has the most complicated work history has

41 spells (including spells of nonemployment) in the history, leading to 26 set of variables added to accommodate this particular work history (see Table 3-3).

- Spousal working history: some respondents have very complicated and involves many changes, the longest case for this set of questions involves 22 spells (including time out of the labor force), leading to 10 sets of variables added to the data set (see Table 3-4).
- Residential history: some respondents have changed places of residence more than 15 times since they were 15 years old (5 more places were added); also see Table 3-5.

For the purpose of international comparison, we added a set of new variables to convert local industrial classification system to international coding schemes (ISIC, rev 3.1). These included the following variables:

d5_(X)	d5isic_(X)	(X) is the sequential number of the R's job spells. It varies from 1 to 41.
e5c_(X)	e5isic_(X)	(X), runs from 1 to 22, is the sequential number of the spouse's job spells.

Because of the education expansion and reform, the name of the school when the respondent attended the school may be different from its current name. For example, a junior college may upgrade to become an university in recent years. We therefore provide two set of variables for the school names, one contained the name when the respondents attended the school (original codes), the other contained the names of the same school in 2005 (newscode). There are also two set of codings for school major, one is the detailed classifications of Ministry of Education (MOE), the other converted the detailed codings into international comparable scheme (ISCED 1997). The newly added variables included:

Table 3-7: Additional Variables for School Names and Majors

School name when the respondent attended the school	School name in 2005	NOTES
c4e(X)	newscode(X)	(X) is the sequential number of education spells, ranges from 1 to 7.
Detailed major (MOE)	ISCED 1997	
c4f(X) (omitted for protecting respondents' anonymity)	isced(X)	(X) is the sequential number of education spells, ranges from 1 to 7.

The information on the detailed college major and the detailed vocational high school major were omitted to protect respondents' anonymity; they can be made available upon special request. Broad groups of college-level school major are listed in Appendix 6. High school vocational track majors were recoded into equivalent ISCED codes, the grouped fields of study are listed in Appendix 8.

3. Revised and Newly Added Response Items

When respondents answered “other” and specify, and when the percentage of the similar responses listed under “other” is larger than 1 %, we included such responses as a new option for the original question and provided a code for them. We detail such additions in the following:

1. b10a: “Which one of the following best applies to your father's job when you were 15 years old? ” Newly added item: (16) Nonprofit Organization.
2. c8: “What is your current marital status?” Newly added item: (5) (other, please specify) cohabitation.

3. d9: “How did you find your job at this workplace?” Newly added item: (15) returned to the previous employer, (16) lateral transfer/job rotation; (17) privatization/become state own, (18) elected to public office; (19) alternative military service/joined military; (21) Found the job by myself; (22) Introduction by a public organization other than public employment agency.
4. d11: “Does/did this job require you to work or be involved in work-related social activities at nights or on weekends/holidays?” Newly added item: (5) it depends.
5. d12: “When you started working at this workplace, did your income increase or decrease compared to the previous job?” Newly added item: (5) salary not fixed.
6. d13: “If this is not your current job, why did you leave this job?” Newly added items: (09) job rotation/lateral transfer; (10) in/out military service; (11) to start a business/spinoff; (12) return to school; (13) physical reasons (aging/illness/injury); (14) prepare for examinations/study; (15) move to other places; (16) to help friend/family business; (17) go home/homesick; (18) tired/dont want to work/ take a break; (19) company restructuring/job abolished; (20) company moved to other place; (21) go abroad; (22) no customers/no business; (23) finished intern/graduated from school; (24) job training/to learn new skills; (25) want to try different jobs; (26) pursue other goals in life; (27) incarcerated; (28) dismissal/got fired.
7. e4a: “Does your husband/wife work now?” Newly added: (1) Yes, works until now or retired; (2) No, never worked after marriage; (3) Yes, but in and out of the labor market; (4) Cannot tell.

8. f7: "Please circle all cohabiting members." Newly added: (21) Ex-spouse; (22) Common law spouse; (23) Divorced son; (24) Divorced daughter; (25) Child (gender unknown); (26) Son (marital status unknown); (27) Daughter (marital status unknown); (28) Step father; (29) Step mother; (30) Uncle; (31) Aunt; (32) Nephew; (33) Niece; (34) Nephew or niece; (35) Nephew or niece of the spouse; (36) Cousin; (37) Brother's wife; (38) Sister's husband; (39) Spouse of sisters/brothers in law; (40) Relative; (41) Cohabitant; (42) Lover or betrothed; (43) Friend; (44) Partner/Colleagues; (45) Family of the respondent's lover.
9. f11: "The place you currently live is a_____." Newly added: (8) iron shelter; (9) bungalow
10. f12: "Who owns your current home?" Newly added: (9) Other person (i.e., rental pay rent; (12) jointly owned by me and my siblings; (13) owned by other siblings; (14) owned by my grandparents.
11. g4: "If you were to change jobs in the future, is there anyone whom you could personally call on to help in your search for a new job?" Newly added: (13) classmates/friends; (14) do not want to work; (15) myself; (21) family and relatives; (22) employment agency.
12. g12: "How often do you go to temple, church, etc. or attend religious activities?" Newly added: (95) it depends.
13. h5: "Among the five political parties in Taiwan (i.e., Kuomintang, Democratic Progressive Party, People First Party, Taiwan Solidarity Union, and New Party), which one do you support more?" Newly added: (9) support candidates, no preference for the party; (10) it depends on the candidates.

Please refers to Appendix 9 for a complete list of all the variables included in the data. Appendix 10 listed all the value labels used in the data.

4. Chinese-Only Variables

During the interview, for certain information such as company names, contents of work, etc, respondents provided information only in Chinese. Please note that for the variables listed in Table 3-8 there is no English translation provided. Open-end answers in Chinese are included for these variables.

g11_ch	texts for[other category] in g11
h5_ch	texts for[other category] in h5

5. Chinese-Only Value Labels

Schools and detailed college majors were coded using MOE's standard classification system. Because MOE did not provide English names for all schools, we were only able to attach English labels for the names of college/university (see Appendix 5), but not for high schools. The Chinese names for high school are listed in Appendix 7.

SECTION IV: Areas Included in the Survey

Tables 4-1 to 4-6 show the actual areas included in the sample, as well as the numbers of villages or districts selected from each of the broader geographic category (see Section I for sampling methods in detail).

SECTION V. Various Issues Regarding Occupations and Industries

- (1) We defined respondents who are “working” as those who do not hold student status, who work at least 15 hours per week, and who have been working for at least one month. However, if the respondents go to night school but work full-time during the day with or without pay, such work can also be included in our sample. However, volunteering work is not included. We kept the respondents’ answers about their jobs in the data if they worked for fewer than 15 hours per week but identified themselves as having a job.
- (2) Question b10a, b11a, b12a, d3, and e5a are about respondents’ employment status (i.e., “who do you work for?”). We made the following decisions and changes surrounding these questions.
 - a) We added one new category (16) “Nonprofit Organization,” which included all sorts of voluntary associations.
 - b) If a respondent was employed by a public school, the employer was coded as (04) “Employed by the government”
 - c) If a respondent was hired by public hospitals, his/her employment status was coded as (05) “employed by government-owned enterprises.”
 - d) If a respondent was hired by a private school or private hospital, the employment status was coded as (10) “Employed by a private enterprise, not under a condition specified above.”
 - e). If a respondent is working part-time, or as a temp who get paid on a piece-rate or “pay by the hour” basis, when answering “how many people are in your

company/organization,” his or her answer was coded as (01) “1 person”; and his/her answer for “whether you are holding a supervising or managing position”, was coded as (99).

f). When a respondent’s employment was in Mainland China, the guideline was as follows: if a respondent worked in state-owned units in China before 1949, the answer for his or her employer was coded as (04) “Employed by the government”, or (05) “employed by government-owned enterprises;” but if this respondent worked in state-owned units in Mainland China after 1949, the answer for his or her employer was coded as (10) “Employed by a private enterprise, not under a condition specified above.”

- (3) Although the interviewers were asked not to include lateral job transfer as a separate “job spell” unless the job change was accompanied by an occupational change, interviewers might still document some of the lateral transfers in the work history section. In those cases, the information in “company ID,” “employment status,” and “number of employees in the company” for the two consecutive spells will be identical and the answers in D13 (“If this is not your current job, why did you leave this job?”) will be coded as (09) (“job rotation/lateral transfer”) for the spell before the job change, and the answer in D9 (“How did you find your job at this workplace?”) will be coded as (16) (“lateral transfer/job rotation”) for the spell after the change. Careers in the following industries/establishments might involve more frequent internal job transfers: telecommunication, post office, police office, and military.

- (4) A small number of respondents reported not having jobs at the time of interview and yet had “earnings from employment.” It is possible that a respondent did have earnings from employment (insofar as the respondent perceives subjectively), but his or her type of employment was not considered as “work” defined in this survey.

SECTION VI. Miscellaneous Issues

There remain a few other issues that may concern researchers. In the following we provide clarifications.

(1) *Section B: parent's working status*

- a. The age difference between respondents and their parents might be smaller than 15: When asking situation regarding “parents”, we did not specify “biological parents” from others. For this reason, when respondents had step parents or parents through adoption, the parent-child age difference could be smaller than 15 years. Nevertheless, a small portion of the respondents whose parents were very close to them in age did indicate that the reported parent was their birth parent.

(2) *Section C: education history*

- a. When asking “C4 Please tell me all the schools you have attended after graduating from junior high school.”, and the follow-up question c4a, “Please tell me the type of school you attended.” we changed the original response items to 24 items (from the 9 original items). The new response categories are as follows:

- (01) None ⁵
- (02) Literate, but no formal schooling ⁶
- (03) Elementary school, not graduated
- (04) Elementary school, graduated

⁵ It indicates that a respondent did not have formal education and is illiterate.

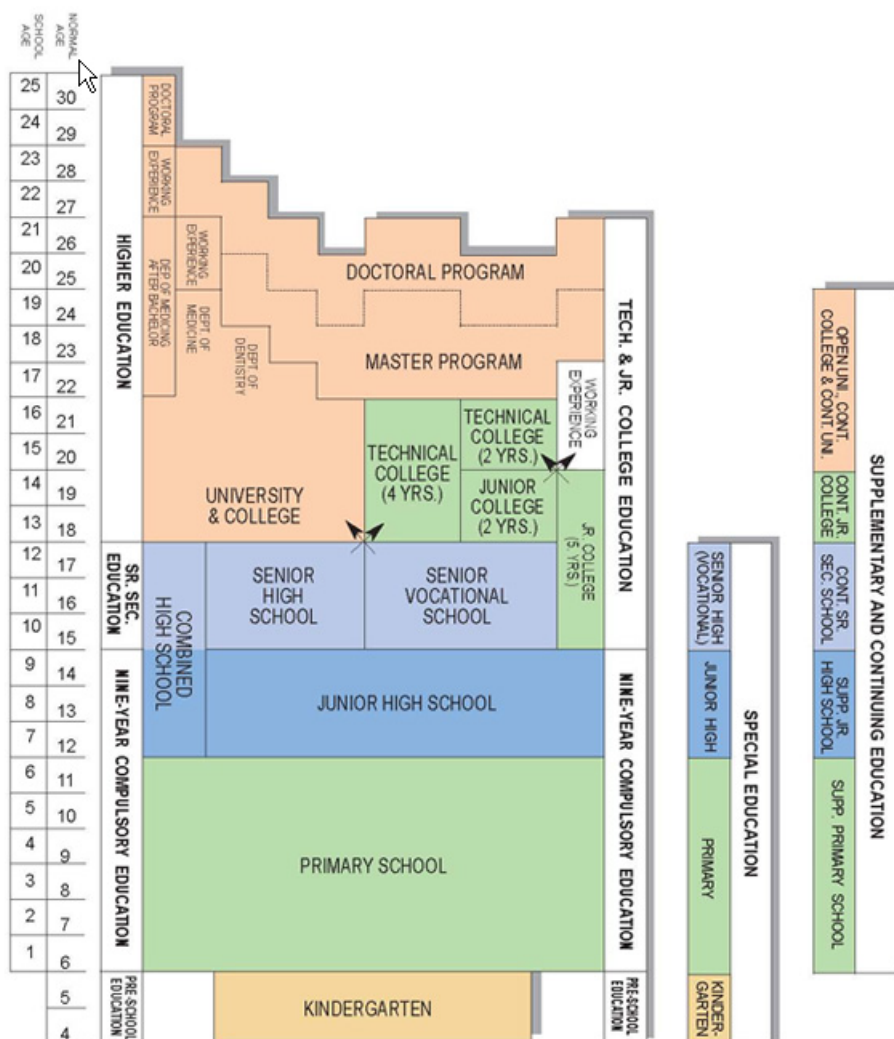

⁶ It indicates that although a respondent did not attend any formal education, he or she receive schooling at home and is literate.

- (05) Junior high school, not graduated
- (06) Junior high school, graduated
- (07) Vocational junior high school
- (08) High school, general major
- (09) High school, vocational major
- (10) Vocational high school
- (11) Drill sergeant school
- (12) Five-year junior/technical college
- (13) three-year junior/technical college
- (14) Three-year junior/technical college
- (15) Military junior college (old system)
- (16) Two-year military junior college (new system)
- (17) Correspondence study, junior-college level
- (18) Correspondence study, university level
- (19) Military/police academy
- (20) Science and technology university/college (4 years)
- (21) Normal university/college
- (22) Master's degree
- (23) Doctoral degree
- (24) Other (please specify)

For more information about the school system in Taiwan, please refer to Figure 1.

Figure 1. Current School System in Taiwan.

Current School System

- b. If a respondent attended foreign public schools, when answering c4d “is the school private or public,” the answer was coded as “private school.”
- c. If a respondent attended 5-year junior collage (which means that he or she did not attend high school), he or she still needed to answer c5, “Have you ever retaken the school entrance exam (in the next year) in order to attend a high school/junior college/university?”
